

Look at American Technology... Innovation by Design.

@HOME SERIES™

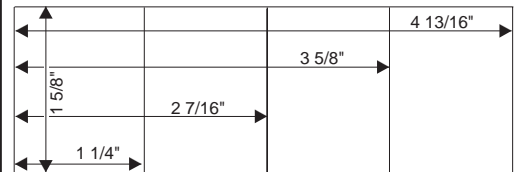

The @HOME SERIES™ 12V wall switch panels were developed based on the collective input of engineers and interior design personnel within our industry.

The result is a family of new switch panels with the following features:

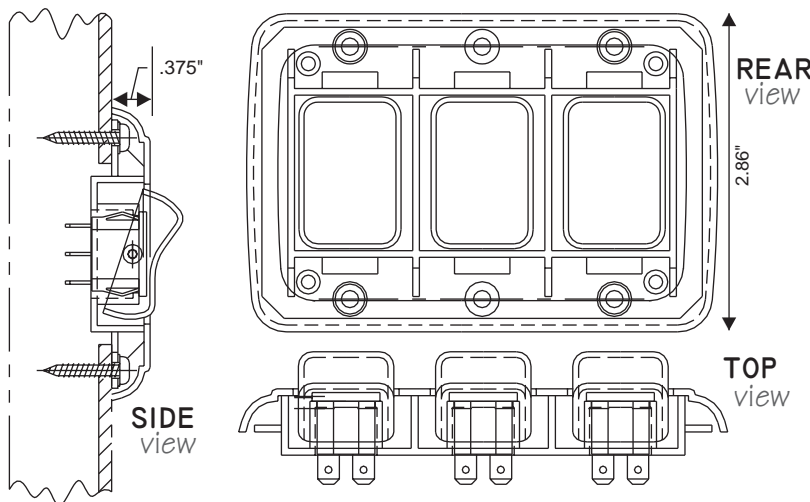

- Contoured rocker switch with a 360% larger switch surface than the competition.
- Low profile radius switch panels with 50% less height from the wall than the competition, while maintaining a shallow wall depth.
- Multiple switch configurations provide superior cosmetic design, fit, and function while using the same switch button.

Wall Opening Requirement
