in the control panels

delayed **ENTRY/EXIT** lighting  
custom **PROGRAMMABLE** system  
tailored to **YOUR** specific needs!

American Technology Components has designed a system which offers the convenience of backlit push button switch controls for all interior 12 volt lighting and accessories.

All functions are controlled by the main fuse panel microprocessor, which is programmed to meet your vehicle's specific requirements.

A single connection RJ11 cable is all that is required for each switch panel - up to eight panels!

This exclusive system also detects vehicle entry and will turn on lights using a timed circuit when entering or exiting the vehicle.

We offer the option of zone control lighting - multiple lights with one switch or a single light with multiple switches.
