RV SWITCHING SYSTEM

American Technology Components has designed a system which offers the convenience of backlit push button switch controls for all interior 12 volt lighting and accessories.

All functions are controlled by the main fuse panel microprocessor, which is programmed to meet your vehicle's specific requirements.

A single connection RJR11 cable is all that is required for each switch panel - up to six panels!

This exclusive system also detects vehicle entry and will turn on lights using a timed circuit when entering or exiting the vehicle.

We offer the option of zone control lighting - with one switch and multiple lights.
